GGobi and Database Management Systems from GGobi Reading data from MySQL

Duncan Temple Lang, Lucent Bell Labs

July 28, 2001

Abstract

A common source of data is Database Management Systems (DBMS), and speci cally relational

```
Host:        tuolomne
User:        duncan
Database:    ggobi
Data query:  SELECT * from flea;
#Password:
Color query: Hi there
```

Figure 1: Default SQL Connections

This approach allows one to store symbolic information about how to obtain the 5ata. For basic security reasons, the password used to access the 5ataset should not be stored in this le. In the case that it is, it is
